Summary

My name is Ahmed Naguib, a web developer specializing in PHP and proficient in using the Laravel framework. I have a passion for developing web applications and am always eager to contribute to a creative team. I have hands-on experience in building and troubleshooting software projects, and I continuously strive to effectively apply my skills in real and innovative projects.

Back-end Developer (PHP Laravel)

Mar 2024 - Present

Projects

AM-Sender

AM-Sender is a marketing platform designed to send targeted offers to customers via WhatsApp, aiding in increasing sales and automating business growth. It supports multi-device campaigns to reduce ban risks, offers seamless API integration, group member extraction, and real-time message tracking. Developed using Node.js and Laravel.

Fancy Hotelcoo

Fancy Hotelcoo is an internal Laravel dashboard built for event organizers. It streamlines client management, dynamic contract generation, and coordination with staff through WhatsApp API. The system also features role-based access control, CRM tools, employee attendance tracking, and detailed logs. Developed using Laravel.

Kotoby

Kotoby is a full-stack web platform built with Laravel that allows users to read and download books for free. The system includes an automated crawling mechanism to fetch books from external sources without manual updates, along with a custom admin dashboard for monitoring content and statistics. Developed using Laravel.

Takhleed – Saudi Heritage Art Platform

Takhleed is a cultural initiative by TRI Company that transforms stories from Saudi heritage into immersive art experiences. I developed the backend with secure RESTful APIs and a custom admin dashboard to manage artworks, artists, and content. The system was optimized for performance and scalability. Developed using Laravel.

Ballora – Same-Day Balloon Gift Store

Ballora is an e-commerce platform for balloon flower gifts with same-day delivery. I developed the backend system including RESTful APIs and an admin dashboard with role-based access. Features include order management, time-slot availability, WhatsApp verification via AM-Sender, and performance optimization. Developed using Laravel.
